## **DETAILED ACTION**

### ***Continued Examination under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/24/08, has been entered.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Moore (Reg. No. 56272) on February 04, 2009. Applicant agreed to examiner's proposed amendment to cancel claim 16, in order to make the application in condition for allowance. Therefore, claims 1 and 3-15 are allowed and claim 16 is cancelled.

***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance: In response to the final office action, dated on 10/29/08, further in view of applicant's amendments filed on 11/24/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks in view of the amendment as discussed in page 7 through 11, the arguments has been found persuasive, because the amended limitation to claims 1 and 9 overcome the prior arts used against the application, and the rejection has been withdrawn. Claim 2 was cancelled previously by applicant, and claim 16 is cancelled by above indicated examiner's amendment. Claims 1 and 3-15 are pending in the application. Up on further review, a search has been conducted and updated.

However, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended, and therefore claims 1, 3-15 have been allowed for the reasons given below, including all dependent claims depend on therefrom:

With respect to claims 1, 3-8 the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, a scanner for reading an original document and forwarding read data to a designated terminal connected to a network, comprising: an operating panel configured to input and display processing conditions, the processing conditions including file format information:

resolution power information, image processing method information, and density information; and a controller that acquires the processing conditions from the operating panel, reads an original document, generates transmission data according to the file format information input from the operating panel and forwards the transmission data to a designated terminal according to the acquired processing conditions, wherein the operating panel displays icons indicating a selected file format, resolution power, image processing method, and density at least when the operating panel displays a screen for designating the terminal and displays a screen for designating the processing condition.

Further, regarding to claims 9-15, the prior art searched and of record neither anticipates nor suggests a scanner for reading an original document and forwarding read data to a designated terminal connected to a network, comprising: a reading unit that reads an original document by scanning and generating corresponding image data; a transmission data composing unit that processes the image data into transmission data; a network control unit that forwards the transmission data to a plurality of terminals connected to the network; an operating panel including a display unit and a plurality of input keys; and a control unit that controls the reading unit, the transmission data composing unit, the network control unit and the operating panel; wherein the operating panel is configured to allow an operator to select image processing conditions of the image data, the image processing conditions of comprise a file name and a file format, resolution power, image processing method, and density, and the operating panel is configured to display icons indicating a selected file format, resolution power, image processing method, and density at least when the operating panel displays a screen for

designating the terminal and when the operating panel displays a screen for designating the image processing conditions.

Therefore, claims 1, 3-15 are Allowed for the reasons the claimed invention are distinct from the searched and of record neither anticipates nor suggests the claimed invention alone in combination.
